oluntary Results Feedback Form	
> I am an examiner in Workgroup: Example: 1610	
> Relevant prior art found, search results used as follows:	
☐ 102 rejection	
☐ 103 rejection	
Cited as being of interest.	
Helped examiner better understand the invention.	
Helped examiner better understand the state of the art in their technology.	
Types of relevant prior art found:	
☐ Foreign Patent(s)	
<ul> <li>Non-Patent Literature         <ul> <li>(journal articles, conference proceedings, new product announcements etc.)</li> </ul> </li> </ul>	
Relevant prior art <b>not found:</b>	
Results verified the lack of relevant prior art (helped determine patentability).	
Results were not useful in determining patentability or understanding the invention.

used. The DNA construct may contain a promoter region in operative association with a signal peptide coding region. The promoter/signal construct is suitably provided with a flanking restriction site to allow precise coupling of the protein coding region to the signal peptide coding region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        In the constructs of the invention, the promoter region naturally associated with the alcohol dehydrogenase I (alcA) gene and the aldehydrogenase (aldA) gene of A. nidulans or naturally associated with the glucoamylase gene in Aspergillus niger may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 1A; 75pp; English

                                                                                                                                                                                                                                                                                                                                                                                                              Spores of Cladosporium herbarum are the most common forgal spores found in the air; they can cause allergic reactions. Various Clah allergens and sequences encoding them have now been isolated. The mature Clah53 allergen has moi, wt. 53 kD and is encoded by cDNA sequence AAQB6278. The allergen has homology to alderyde dehydrogenases. Potential epitopic subfragments were identified by computer analysis of the amino acid sequence. See AAP71892-P71906 for potential B-cell epitopes and AAP72615-P72627 for potential T-cell

Species of Alternatia diternata can cause allergic reactions. Various Aira allergens and sequences encoding them have now been isolated. The mature Alta53 allergen has mol. wt. 53 kD and is encoded by cDNA sequence AAQ2525. The allergen has benclony to aldebyde debyded operates. Potential epitopic subframents were identified by computer analysis of the amino and seriod sequence. See AAR71804-P71816 for potential R-cell epitopics and AAR71817-P71832 for potential T-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alternaria alternata allergen Alta53.

protein. ALDH5 proteins may be used to generate antibodies. Haplotyping method can be used by scientists to validate ALDH5 as a candidate target for treating a specific condition or disease predicted to be associated with ALDH5 activity, and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted to be associated with ALDH5 activity. Information on polymorphisms on the ALDH5 gene can be applied for studying the biological function of ALDH5 as in identifying drugs targeting this protein for the treatment of disorders related to its abnormal expression or function. The products of the invention have antialcoholic activity. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       his invention describes a novel isolated genes and haplotypes of the human aldehyde dehydrogenase 5 (ALDH5) gene containing polymorphic sites. The polymorphic ALDH5 variant is useful in studying the effect of the variation on the biological activity of ALDH5 and on the binding affinity of candidate drugs targeting ALDH5 for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                     alcoholism and alcohol-induced disorders. Polynucleotides comprising polymorphic gene variant or fragment may be used for therapeutic purposes. ALDH5 protein isoforms may be used in assays to measure the

   This invention describes a novel isolated genes and haptotypes of the haman aldebyde dehydrogenase 5 (LDH5) genes containing polymorphic sites. The polymorphic ALDH5 variant is useful in studying the effect of the variation on the biological activity of ALDH5 and on the binding affinity of candidate drugs targeting ALDH5 for the treatment of affinity of candidate drugs targeting ALDH5 for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Misc-difference 470
                                                                                                                                                                                                                                                                                                                                                                                                                         New genetic variants with polymorphisms in the aldehyde dehydrogenase (ALDH5) gene, useful for studying the function of ALDH5, and for expressing ALDH5 protein which is useful in screening drugs for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ALDHs, human, polymorphism, Eagletype, aldebyle Johydrogenase 5, binding affinity; drug targeting, alcoholism; alcohol induced disorder,
                                                conditate drugs for treating a specific condition or disease predicted to be associated with ALDH5 activity. Information on polymorphisms on the ALDH5 genee can be applied for studying the biological function of ALDH5 as well as in identifying drugs targering this protein for the
                                                                                                                     target for treating a specific condition or disease predicted to be associated with ALLHS activity, and in the design of clinical trials of
                                                                                                                                                         protein. ALDH5 proteins may be used to generate antibodies. Haplo method can be used by scientists to validate ALDH5 as a candidate
                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Fig 3; 96pp; English

                                                                             prostate cancer in mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

ABG61800-ABG61944 represent prostate cancer associated proteins.
                                                                                                                                                                                                                                         comportassociated transcript in a cell from a patient. The method comportses contacting a biological sample from the patient with prostate concertassociated polynucleotides (designated polynucleotides to a sequence that is at least 80% identical to them. The prostate concertassociated polynucleotide sequences
                                                                                                                                                                             are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as bumans or other mammals (** 9 mor), shorp and dog The methods of the invention are useful for diagnosing and treating
                                                                                                                                                                                                                                                                                                                                                                                                           Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer associated g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;

endometriosis. The gene products may be fibrocettin, p27, referilocalbin, alabahide dehylidgense 6, gravin, phosphelipase C epsilon, elastin, insulic-like growth factor binding protein-2, alpha-2 type IV collagen, transmembrane receptor PTK7, collagen type XVIII alpha 1,
                                                                               plathlet derived growth factor receptor alpha, laminin M chain, subtilisin like pro-left PATS4 or indomen. The method is useful for included diagnosts of endometriosis, and also for monitoring progress and treatment of the disease. The present sequence is human aldehyde.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              49 TKIFINNEWHESKSGKKFATCNPSTREGICFVEEGBREDVDKAVEAAQVAFORGSPWRPL, 108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   140 DGRMIDTGRTHFSYTKRQPLGVCGQIIPWNFPLLAWAWKIAPALVTGNTVVLKTAESTPL 199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               259 AGLKKVTLELGGGKSPNIVFADAELKKAVONIILGIYYNSGEVCCAGSRVYVEESIYDKFI 318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                319 ERFKAASESIKVGDPFDESTFQCAQTSQMQLNKII.KYVDIGKNEGATI.ITGGEKLGSKGY 378
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  379 FIKPTVFGDVKEDMRIVKEEIFGPVVTVTKFKSADEVINMANDSEYGLAAGIHTSNINTA 438
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement [11] and its binding partners are useful in medical imaging of sites expressing (II). [1] and [II] are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polyunchecide sequences have applications in diagnostics, forensics, que mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       22 TGLFINNKFVPSKQNKTFEVINPSTEEEICHIYEGPEDDVFEAVQAADPAFSNGS-WNGI 80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. ABGUUU10-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note. The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and given mapping, and in re-ambinant production of (II). The polymelegides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        169 QGKTIPTDDNVVCFTPHEPIGVCGAITPWNFPLLMLVWKLAPALCCGNTMVLKPAEQTPL

```
the invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                81 DPTDPGRAL/PLARLIFQDPFDVIASTETLOMERATSSSPG_DVDLVINYLKSSAGFADKT_139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100 DASPROPLIYELADI MEREZVYLASI ETLIDMAKPYSMSYNVITLETATENLIKYFAGWADEN 159

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
```

of acetyl CoA.

```
acetyl CoA synthetase (ACS), various subunits (specifically the E3 subunits) of plant plastidic pyrovare dohydrogense (PEH), the A and B subunits of a plant ATP citrate lysek (ACL), Arabidopsis pyruvate denytrogense (ALH). Arabidopsis aldohydrogense (ALH). Secretifically ALH-2 and ALH-4. The polypeptides can be expressed by standard recombinant methodology. The ACS, pPBH, ACL, PBC and ALDH polypeptides, methods and nucleic acid molecules of the invention are used to alter the level of acetyl CoA is expected to affect the biosynthesis of very long chain fatty acids and flavonoids. The enzymes may also be used for in vitro synthesis of acetyl CoA, which in turn can be used to produce acetyl CoA plastidic ACS, pPBH, ACL, pyruvate decarboxylase, acetyl CoA hydrodase, mitochondrial pyruvate dehydrogenase and aldehyde dehydrogenase are involved in the biosynthesis
                                                                                                                                                                                             399 YFVQPTVFADVQDDMTIAREFIFGPVQQLIRFKKI,DEVIERANNSFYGI,AAAVFTKDLDK 458

New isolated nucleic acid detection reagent for detecting 1000 or more

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in Pluridating cell signaling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          185 TKLFINNEFVDSVSGKTFATFNPATSKEIVQVSEGDKADIDLAVKAAKKAFHRESEWRKL 244

Hematopoietic cells transfected by the vector are resistant to cyclophosphamide, providing a means of gene therapy that allows higher doses of toxic drugs to be used in cancer chemotherapy. The human genes may also be used as selectable markers for mammalian cell transfection and for transgenic animal breeding.
                                                                                                                                                                                                                                                                                                                                       glutamylcysteine synthetasé, hematopojetic cell, cyclophosphamide, chemotherapy, transyenic animal, yene therapy, cancer therapy;
